Art Unit: 1623

Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Malabarba et al (U.S. Patent No. 5,750,509).

Malabarba et al disclose a composition comprising a dalbavancin antibiotic in combination with a stabilizer (column 28, lines 9-12) and in particular in combination with lactose or sorbitol (column 27, lines 49-62). Malabarba et al further disclose that the parenteral administration is preferred (column 27, lines 46-48) and disclose the effective dosage of the compound (column 28, lines 20-28). However, Malabarba et al do not disclose the pH of the composition being of about 3-5. Since to vary the pH of a pharmaceutical composition is within the ordinary experimentation by a person having ordinary skill in the art, the claimed compositions are deemed prima facie obvious over Malabarba et al.

Applicant's arguments filed July 15, 2005 have been considered but have not been found persuasive.

Applicant contends that the conventional wisdom for glycopeptide antibiotics is that no stabilizers are need. Applicant's arguments and the prior art submitted by applicant have been considered but have not been found persuasive in view of the Malabarba et al patent which teaches a composition of dalbavancin in combination with a stabilizing agent (column 28, line 12)
